

Bridges & Overpasses

New or existing bridges and overpasses benefit from composite reinforcement solutions a variety of ways:

- Restore deteriorated/corroded decks, beams, columns, piers, girders and other structural components
- Improve load strength
- Improve resistance to shear
- Reinforce against seismic activity
- Repair traffic impact damage

Benefits of V2's Composite Reinforcement Solution

- Versatile
- Stronger, lighter, faster and easier to install
- Minimize traffic closures
- High fatigue & corrosion resistance
- Extreme temperature tolerance
- Low conductivity
- Significantly lower installed cost
